Error codes

Every error response carries a `code` from this table and a human-readable `message` that may change between releases; branch on the code, never on the message.

Code	HTTP	Meaning	Retry
`station_unknown`	404	No station has that code.	No
`station_retired`	410	The station stopped reporting permanently.	No
`key_scope`	403	The key's project does not cover the station.	No
`rate_limited`	429	The window is exhausted.	After `Retry-After`
`upstream_delayed`	503	The station has not reported in time.	With backoff

> **Retrying**
>
> The backoff rule for `rate_limited` and `upstream_delayed` is in Rate limits.
