Release notes

Changes to the API, newest first. Dates are the day a change reached every region.

2026-09-15 Latest

- `fields` on the hourly forecast accepts `precipitation`, returning probability and expected amount. → Hourly forecast
- `X-Limit-Hour` is now sent on every response, not only when the minute window is low.

2026-07-02

- Readings older than fifteen minutes carry `stale: true` instead of being withheld.
- The `station_retired` error replaces a generic `404` for stations that stopped reporting permanently.

2026-04-10

- First public release of `/v1`.

> **Deprecation policy**
>
> A field or endpoint is announced here at least ninety days before it changes shape, and the previous behaviour stays available for that period.
